

LEARNING INTERNSHIP PORTFOLIO

1M1B Green Internship Program — Batch 7

Intern Name	Dakshraj Singh Chandawat
Role	Data Analysis & Backend Leader
University	Alliance University, Bangalore
Degree	Bachelor of Computer Applications (BCA)
Team Name	Team The Green Ledgers
Program	1M1B Green Internship In Partnership with AICTE & Salesforce India SEMI (Industry Partner)
Year	2026

#1M1B #GreenInternship #ClimateAction #YouthForChange #Sustainability

1. About the Program

The 1M1B (1 Million for 1 Billion) Green Internship Program is a prestigious, nationally recognized initiative designed to equip the next generation of changemakers with the knowledge, tools, and mindset to drive real-world climate impact.

Batch 7 of this program was conducted in partnership with:

- AICTE (All India Council for Technical Education) — Academic partner
- Salesforce India — Supporting partner & technology enabler
- SEMI — Industry partner providing domain expertise

The program immerses participants in the intersection of sustainability, technology, and leadership. Interns work on live projects, analyze real-world datasets, and build solutions that address pressing environmental challenges — particularly around carbon markets, climate data, and green innovation.

2. Team The Green Ledgers

Our team, The Green Ledgers, collaborated to build a full-stack sustainability solution — from primary research and stakeholder engagement to data analysis, UI design, and live deployment.

#	Team Member	Role	Key Contributions
1	Dakshraj Singh Chandawat	Data Analysis & Backend Leader	Carbon trading data analysis (5,000 records), Tableau dashboard, backend architecture, project lead
2	Tejas Pebam	UI/UX Design & Presentation	Marketplace UI/UX design, visual presentation, user experience flows
3	Laishram Ritikumar Singh	Research & Stakeholder Outreach	17 stakeholder surveys, primary research, carbon credit market research

3. Learning Objectives

Through this internship, the team aimed to achieve the following learning outcomes:

- Understand the fundamentals of carbon markets, carbon credits, and emission trading
- Apply data analysis techniques on real-world carbon trading datasets
- Develop technology-driven sustainability solutions using modern tools (Tableau, web development)
- Learn how sustainability, technology, and leadership intersect to drive climate impact
- Build stakeholder communication and research skills through primary surveys
- Experience the full product development lifecycle — from ideation to live deployment
- Align project work with UN SDG 13 (Climate Action) and green innovation principles

4. Activity Log — Post 1: Green Intern Selection

4.1 Overview

Milestone: Selection as a Green Intern — 1M1B Green Internship Program, Batch 7

Dakshraj Singh Chandawat was officially selected as a Green Intern under the prestigious 1M1B Green Internship Program, Batch 7. This milestone marked the beginning of a purpose-driven journey to explore how technology, sustainability, and leadership combine to create real-world climate impact.

4.2 Key Details

Field	Details
Program	1M1B Green Internship Program — Batch 7
Partners	AICTE, Salesforce India, SEMI
University	Alliance University, Bangalore
LinkedIn Post	https://www.linkedin.com/feed/update/urn:li:activity:7433037183827058688/
Engagement	9 reactions Public post

4.2.1 LinkedIn Post Screenshot

Post 1 — Green Intern Selection (LinkedIn, 1M1B Batch 7)

4.3 Learning Outcomes

- Gained awareness of the 1M1B ecosystem and its mission to connect 1 million youth with 1 billion people through purpose-driven action
- Understood the structure of the Green Internship Program and the role of corporate and government partners
- Set personal learning goals around sustainability, climate data, and technology

- Developed a public professional presence by documenting internship milestones on LinkedIn

5. Activity Log — Post 2: Carbon Trading Analytics Dashboard

5.1 Overview

Milestone: Built a Tableau Analytics Dashboard on 5,000 real carbon trading transactions

As part of the internship deliverables, Dakshraj dug deep into a dataset of 5,000 real carbon trading transactions and built a comprehensive analytics dashboard on Tableau. This project demonstrated applied data analysis skills on a real-world sustainability dataset, uncovering meaningful insights about carbon markets in India.

5.2 Key Findings

#	Insight	Finding
1	Top Industry	Manufacturing sector leads trading volume across all industries
2	Verification Rate	50.5% of all trades are verified; 49.5% are disputed
3	Top Fuel Type	Natural Gas is the leading fuel type in carbon transactions
4	Price Trend	Carbon price (USD/tCO2) shows a gradual decline from 2024 to 2025
5	Industries Covered	Manufacturing, Energy, Steel, Cement — all tracked by emission allowance vs. produced

5.2.1 LinkedIn Post Screenshot

Post 2 — Carbon Trading Analytics Dashboard on Tableau (LinkedIn)

5.3 Dashboard Components

- Price Trend chart — Carbon price (USD per tonne CO2) from 2024 to 2025
- Credits by Industry — Horizontal bar chart showing Buy vs. Sell breakdown by industry
- Emission Allowance — Side-by-side comparison of allowance vs. produced tCO2 per industry
- Verification Status — Pie chart showing Verified vs. Disputed trade proportions
- Filter dimensions: Transaction Type (Buy/Sell), Fuel Type (Coal, Mixed Fuel, Natural Gas, Renewable), Verification Status

5.4 Tools & Technologies

- Tableau — Data visualization and dashboard creation
- Real carbon trading dataset — 5,000 transaction records
- Data Analysis techniques — Aggregation, segmentation, trend analysis

6. Activity Log — Post 3: Final Project — India's Carbon Credit Marketplace

6.1 Overview

Milestone: Final Internship Deliverable — Live Carbon Credit Marketplace deployed on Netlify

The capstone deliverable of Team The Green Ledgers was the design, development, and deployment of India's Carbon Credit Marketplace Simulation — a live, functional web platform deployed on Netlify. This project brought together the team's research, design, data analysis, and development skills into a single working product.

6.2 Project Deliverables Summary

Deliverable	Details
Live Website	1 fully deployed Carbon Credit Marketplace on Netlify
Tableau Dashboard	1 interactive analytics dashboard (5,000 carbon trading records)
Primary Surveys	17 stakeholder surveys conducted for market research
Data Records Analysed	5,000 real carbon trading transaction records
Domain Covered	Carbon credits, emission markets, green technology, climate action
SDG Alignment	UN SDG 13 — Climate Action

6.2.1 LinkedIn Post Screenshot

Post 3 — Final Project: India's Carbon Credit Marketplace (LinkedIn)

6.3 Project Description

- The marketplace simulates India's carbon credit trading environment, allowing users to understand and interact with carbon credit transactions
- The platform was built to go beyond the classroom — taking concepts from theory to a live, functional product
- Research was grounded in 17 primary surveys and analysis of 5,000 real transaction records
- The full development lifecycle was completed: research → design → development → deployment

Hashtags: #1M1B #SDG13 #GreenSkills #CarbonFootprint #Sustainability

7. Skills Developed

Technical Skills

Soft Skills

- Tableau (Data Visualization)
 - Data Analysis & Insight Generation
 - Web Development & Deployment (Netlify)
 - Carbon Market Domain Knowledge
 - Dashboard Design & Storytelling with Data
- Team Leadership & Collaboration
 - Stakeholder Outreach & Survey Design
 - Research & Critical Thinking
 - Professional Communication (LinkedIn)
 - Problem-Solving under Real-World Constraints

8. Personal Reflection

The 1M1B Green Internship has been a transformative experience that went far beyond what I expected from a typical internship. Working on real carbon trading data, deploying a live marketplace, and engaging with stakeholders gave me a tangible sense of what purpose-driven innovation looks like in practice.

As the Data Analysis & Backend Leader, I took ownership of the most data-intensive parts of the project — cleaning, analysing, and visualising 5,000 carbon trading records. Building the Tableau dashboard taught me how raw data, when handled thoughtfully, can tell powerful stories about climate and markets.

Beyond technical skills, this internship deepened my understanding of climate challenges, particularly around carbon markets and emissions trading in India. It showed me that technology and sustainability are not separate pursuits — they reinforce each other when approached with intention.

I am incredibly proud of what Team The Green Ledgers achieved together. From day one to final deployment, our collaboration was rooted in a shared commitment to making something real and meaningful. This internship has solidified my path toward working at the intersection of technology, data, and sustainability.

9. UN SDG Alignment

SDG Goal	Goal Title	How Our Project Aligns
SDG 13	Climate Action	Carbon marketplace, emission tracking, climate data analysis
SDG 9	Industry, Innovation & Infrastructure	Technology-driven green marketplace and data infrastructure
SDG 17	Partnerships for the Goals	Collaboration with AICTE, Salesforce, SEMI — multi-stakeholder model

10. Declaration

I hereby declare that this Learning Internship Portfolio (LIP) has been prepared by me honestly and accurately to the best of my knowledge. All activities, reflections, and deliverables documented herein are a true representation of the work carried out during the 1M1B Green Internship Program, Batch 7.

The LinkedIn posts referenced in this portfolio are publicly accessible and serve as authentic evidence of the learning journey undertaken during this internship.
